

# Lay out your page (step 6 of 9)

Page layouts provide structure in your page — two-column, three-column, and more — making it easy for anyone to create beautiful pages.

1. **Edit** the page.
2. Click the **Page Layout** button in the editor toolbar. It looks like this:

A section is added to your page, dotted lines indicate the section boundaries.

3. Choose a **column layout** to apply to your section, for example two columns.

4. Click the **Add section** button to add another section to the page.

5. Choose a different **column layout** for this section.
6. Click **Update** to publish your changes to the page.

You can add as many sections as you need, and each section can have a different column layout.
